

Management System - Cancel Movie Screening

Name:

Cancel Movie Screening

Description:

This use case covers **removing** an existing movie screening from the system.

Actors:

Administrative staff

Triggers:

The use case is triggered by administrative staff who intend to cancel a movie screening.

Preconditions:

The screening (screen and time) for that movie must already exist in the movie arrangement.

Postconditions:

After the use case is completed, the **movie screening (screen or time)** of the movie arrangement will have been removed.

Course of events:

Basic course of events:

1. The user performs the "Display Arrangement" use case.

2. The user selects the relevant movie screening from the display.
3. The system highlights the movie screening to indicate it is selected.
4. The user selects the cancel function.
5. The user asks the user to confirm.
6. The user selects yes.
7. The screening for that movie is removed from the system and the display is updated.
8. The user selects no.
9. The screening for that movie is not removed from the system.

Extension Points:

None
