

Cinema Management and Booking System

Name:

Display **Time** and **Screen Number** for each **Film**

Description:

This use case covers the navigation of the application to the scheduled **times** for **each movie** and **which screen** they will be shown on.

Actors:

Administrative staff

Triggers:

The use case is triggered by ticket appointment from a potential customer (in person or using apps or whatever).

Preconditions:

None

Postconditions:

After the use case is completed, the correct time and screen number (and all bookings for that film in this timeslot) will be shown in the user interface.

Course of events:

Basic course of events:

1. The user enters the **time** and **film name** of the requested booking.
2. The system displays the booking for that time and film.

Extension Points:

None

Inclusion:

None
